

MARBLE SINKS

Nowadays you can buy the sinks of any type, class, colour and at any price you'd like. The lovers of the original interior solutions purchase the items made of the natural stones more often at the moment. Perhaps, the marble is the most distinguished and desirable material which the sinks can be produced of and which will satisfy even the most demanding customers. The marble items decorating the interior have always been and up till now are considered as an attribute of wealth and luxury as its astonishing pattern is itself a piece of art.

The sink made of natural marble will make your interior splendid, bring it a spectacular respectable look and create the atmosphere of comfort and luxury. Such plumbing fixtures will suit not only the apartments and mansions, but the interiors of hotels, restaurants, cafes, public spaces, etc. The sinks made of marble, obviously, have their own advantages and drawbacks.

ADVANTAGES OF MARBLE SINKS

During the process of crafting a sink, the craftsman is grinding the natural stone to make it of the desired shape. As a result, he creates a one-piece sink featuring smooth shape free of joints and seams, i.e. completely cast.

The main advantages of plumbing fixtures made of natural marble are the following:

Extraordinariness of pattern and shapes The marble is distinctive with the luxury of its colours, interlaced veins and glancing inclusions. Not infrequently; the marble contains the impurities of other minerals, which give the stone a more interesting and unusual look featuring the inclusions of yellow, red, black or green colours.

Pleasant to touch, although it gives you a feeling of chill;

The colours do not fade away

Noise reduction. The marble sink absorbs all the noises. So, the water flowing from the tap will not distract you.

Robustness and durability. Even after a long period of use, such marble fixtures will not get cracked and will retain its perfect look The material is extremely durable, cracks-resistant, does not de-laminate and copes with the significant loads. Its distinctive feature is the complete absence of hygroscopicity.

Perfect look. No rust stains will ever appear on the marble sink surface.

An environmentally friendly item.

The marble sinks do not require specialized treatment. Everything you need to do to keep them clean and intact is to perform the standard sanitation, which won't take you much time

1. Clean the surface with a neutral detergent suitable for treating the stones.
2. Do not expose acids on the marble
3. Periodically treat the surface with a special wax impregnation to preserve the gloss of marble.

These are the three main issues that should be taken into account during the use of fixtures

SPECIAL ADDITIONAL OPTIONS FOR MARBLE SINKS

The item made of the stone, which the palaces of kings and queens have always been decorated with, will undoubtedly adorn your bathroom. The marble featuring the beautiful cold shades, is truly magnificent. It brings the comfort and harmony into your interior.

Onyx

The semiprecious mineral surpasses the marble in some extents. The striped-fibrous structure of this stone looks costly and luxurious. The sinks made of onyx are true pieces of art created by nature and human together. A wide variety of shades – from light yellow to dark brown – allows you to create unique patterns. The onyx, at the same time, can be completely opaque or translucent, glittering like the glass, or with dark and light inclusions within one stone. The onyx is highly repellent stone, because of its low porosity. By purchasing the sink made of onyx you benefit in all respects: you get robust, durable sink of the stunning beauty, bringing you true aesthetic pleasure.

Travertine

The stone of stunning beauty, of light and dark shades, which can be easily finished, is featured by an ornamental pattern. It is used to produce robust, lightweight and durable items of various shapes. The only drawback of this stone is the porosity of its structure. Therefore, the item made of travertine requires special treatment.

Juparana granite

Such stone as granite has countless number of colours Among the sorts of granite there is a group of very diverse stones featuring wild veins and extreme variations of colour. These stones originate from the different countries and have different mineral classifications, but they have one thing in common: they are all entitled as "Juparana". There is more than one type of Juparana granite and each of them has its own features and properties. But, they have one thing in common - they are likely to be of astonishing and mind-blowing colour combinations.

Marble Nero Marquina

Nero Marquina is a sort of marble widespread all over the world. It has vivid, saturated coal-black color decorated with thin, snow-white veins of irregular shape. Luxurious black marble Nero Marquina is one of the most rich-looking sorts of marble, which will undoubtedly make your interior look gorgeous and noble. The only thing you have to do to demonstrate your grandeur is just to include the items made of this unique natural material into your interior. As well as that, by doing so you will solve not only the task of establishing your status and image, but will adorn your interior and get the items of very practical use. The long life time of natural stone gives you the feeling of acquiring something beyond of time, which will be adorning your house forever.

Mongolia Black

Mongolia Black is a stone of intense black color with a fine-grained structure and minimal number of inclusions. You can use this very rigid, dense stone within any architectural project you like. Once polished, the stone has a deep black color. Once it is treated in any other way - deep grey colour. Mongolia Black can be used to produce tabletops, washbasins, sinks, window sills, racks and various decorative details.

Wooden Sand stone

Yellow Sandstone is one of the worldwide famous and very rigid sandstones, also known as Sunny Yellow Sandstone. It is a non-porous, glittering and smooth material, which can be used for building walls, facades, floor coverings, production of handicrafts, sinks and many more.
